

1 Choose a computer

iMac:

The iMac is currently the default setup for presentation in A008.

Personal Laptop:

VGA and DVI inputs are available for use with your personal computer. For a Macbook Pro, there is the proper DVI to Mini-display port adapter available in that room. More adapters are available at Multimedia for loan.

2 Turn on the Projector

Turn on the projector using the computer by logging into the projector's status and control:

1. Open Firefox browser.
2. Choose the link **A00A Data Projector** if using the iMac. Or, if using your own laptop, type this IP address into the URL bar: **10.0.1.24**
3. Choose **Projector Status & Control**. Power on the Projector by choosing "**Power On**"
4. Settings should remain as they are seen in this help-sheet.
5. Turn on the speakers (located to the left of the iMac). Input should be set to Stereo x2
6. Please remember to turn the projector **OFF** in the same way when you are finished.
